HOMEWORK 10

1. It has been raining and 273 worms have come to the surface. The seagulls are satisfied if they eat 11 worms in 'one sitting'. How many seagulls can be satisfied by the worms in the paddock?

2. Each day, children put 124 quarters into a pinball machine at the arcade. How many quarters would be in the pinball machine after 28 days? Bonus: How much money (dollars and cents) would that be?

3. Jameson does his homework and studies for 70 minutes every day. How many minutes does Jameson do his homework or study at the end of a non-Leap year (365 days)? Bonus: How many hours would that be?

4. How many squares can you find that have dots from this array as their corners?

remember a square has to have 4 EQUAL SIDES and 4 RIGHT ANGLES
